## CASE STUDY

### ASTORIA NIGHTCLUB

The management of this Portsmouth nightclub – situated across six storeys – wanted to replace the club’s outdated analogue system with one that provided crisp, clear images in demanding situations.

#### Solution

A 64-camera 1080p Samsung IP system – with 87Tb of storage to handle the recording of all cameras 24/7 for 31 days – was installed to cover all areas of this sprawling venue.

#### Challenges

We had to design and install a system that could cope with monitoring large crowds in low light level conditions, with strobe lighting, smoke and pyrotechnics, as well as run a new network of Cat5e cable across all six storeys of the building.

#### Results

The system delivers clear, sharp video in spite of the demanding environment. Management is able to view live or recorded images of any incident, either remotely or at the Network Video Recorder, and can burn footage quickly for use by police or other authorities.
