## CASE STUDY

Technology used:

## MUTINY FESTIVAL

The festival organisers needed a temporary full-HD surveillance system. The licensing authorities specified where the cameras should be sited and that recordings should be held for one year after the event.

### Solution

We installed six 36x ptz cameras and 11 fixed cameras from Dahua, connected to a secure WiFi network and transmitted back to a temporary police control room, as well as a Logo Wave WiFi transmitter and receiver and Cisco network switches with Power over Ethernet.

### Challenges

We met the challenge of having to install a secure wireless network that had to cover the entire festival site, as well as setting up a temporary control room with multiple screens, DVRs and operator stations.

### Results

The project was delivered on time and on budget and the CCTV operators found the system easy to use. Although we had a team of engineers on-site to deal with any problems, the system operated without any issues for the duration of the festival.

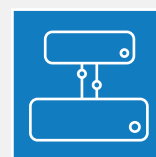

### Solutions installed:

HD CCTV

Intruder
