CASE STUDY

NOVUS LEISURE

Bar and restaurant operator Novus needed WiFi network access points for PDQ credit card machines to be fitted across multiple sites, in order to process payments wirelessly from anywhere at the venues.

Solution

We installed Ruckus network PoE access points in strategic locations across all venues, so that the PDQ terminals could connect seamlessly and give staff the flexibility to take payments throughout each site.

Challenges

We succeeded in running cable and making it look aesthetically pleasing, while connecting it back to the comms room and back-office till system.

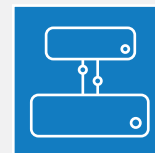

Results

The access points were installed across Novus's venues from Portsmouth to Newcastle, with minimal disruption to their day-to-day running.
